

- Available in our Illusions Basic, Woodlook or solid color Maestro offering
- Curved insert fascia with matching fabric
- Continuous, plastic beaded chain operation, coordinating colors available
- External tear drop hembar
- Heavy duty clutch operates smoothly and locks in place after operation
- Designer colors that match any decor

Specifications:

- 1. CLUTCH:** Corrosion resistant glass reinforced polyester thermopolymer for wear resistance and smooth operation. Internal braking mechanism includes a bi-directional wrap spring that creates a positive mechanical relationship between the roller shade tube unit and the universal installation brackets ensuring stationary positioning in the static state.
- 2. IDLE END CAP:** High strength, fiberglass-filled nylon provide secure anchorage into end bracket.
- 3. ROLLER TUBE:** Extruded-aluminum tubes engineered with a chamfered channel to accept fabric spline and allow fabric to lay across the tube without adding crease lines. Size determined by manufacturer based on fabric selection and shade size to provide minimal deflection and optimal performance.
- 4. CHAIN:** Continuous, plastic beaded chain. Bead stops attached to the chain protect shade from over rotation. Plastic bracket provided to secure chain to wall.
- 5. HEMBAR:** External tear drop hembar with fabric inserted for a clean transition. Color coordinated with shade color.
- 6. FASCIA:** The curved insert fascia shall be attached to the tube mounting brackets by snapping it into place on a hinge rib clip. Size shall be as required to conceal the roller tube and rolled-up shade fabric.
- 7. END CAP:** Color coordinated end caps to cover end of exposed fascia.
- 8. MOUNTING:** Universal type, capable of attachment at top, face, and with left hand or right hand controls.
- 9. INSTALLATION:** Allows for installation at top of window and provides a secure snap-in of the roller shade and fascia
